

HOW TO ENABLE 2FA WITH SMS

How to Enable 2FA with SMS

SMS Two-Factor Authentication (2FA) sends a one-time verification code to your registered mobile phone whenever you sign in. If you prefer receiving your verification code by SMS instead of using an Authenticator App, follow the steps below.

Step 1: Getting Started

Log in to your Silver Bullion Account and choose "SMS Text Message"

TWO-FACTOR AUTHENTICATION SETUP

Enhance your account security by enabling two-factor authentication. This adds an extra layer of protection by requiring a second form of verification when signing in.

Choose your preferred authentication method below to get started.

Authenticator App *(recommended)*

☐ Generate secure time-based codes using apps like 2FAS, Microsoft Authenticator, Google Authenticator, or Authy.

SMS Text Message

☒ Receive verification codes via text message to your registered phone number.

CONFIRM

(As 2FA is required for all accounts, the 2FA Setup page will be displayed upon login.)

Select "SMS Text Message" and click "Confirm" to proceed.

Step 2: Enter SMS Verification Code and Email Verification Code

TWO-FACTOR AUTHENTICATION SETUP

ENABLE SMS TWO-FACTOR AUTHENTICATION

Enter the 6-digit verification codes sent to your registered phone number and email address to enable SMS-based two-factor authentication.

SMS Verification Code

→

Email Verification Code

→

ENABLE TWO-FACTOR AUTHENTICATION

After selecting SMS Text Message, a verification code will be sent to your registered mobile phone.*

Enter the SMS verification code into the **SMS Verification Code** field.

Then, enter the verification code sent to your registered email address into the **Email Verification Code** field.

Afterwards, click "Enable Two-Factor Authentication" to complete the setup.

*If you do not receive the SMS verification code, we recommend using an Authenticator App instead.

Why Set-up 2FA?

Two-Factor Authentication (2FA) adds an extra layer of security to your Silver Bullion account.

When 2FA is enabled, you will also be asked to enter a one-time verification code sent to your mobile phone or generated by an authenticator app. This helps verify that it is you signing in. Even if someone knows your password, they cannot access your account without your verification code. Enabling 2FA greatly reduces the risk of unauthorised access to your account and helps protect your personal information and assets.

We strongly recommend enabling 2FA, as it is one of the simplest and most effective ways to keep your account secure.
